Certification

- Redhat certified system administrator
  Certification id : 230026072

Projects

FLOOD MAPPING & DISASTER MANAGEMENT WEB TOOL

- Flood mapping and disaster management web tool is an online platform that provides access to information and resources related to flood management and disaster response. It typically includes interactive maps, satellite imagery, and real-time data to help assess the extent and severity of a flood event. The tool alsoprovides information on evacuation routes, critical infrastructure, and resources for first responders. The goal of such a tool is to support effective decision-making during disaster events by providing timely and accurate information to aid in response and recovery efforts
